## patient portals and personal health records:

good for your patients and for your practice

---

Extend the efficiencies of your WebChart system and improve patient engagement with a web portal and free NoMoreClipboard Personal Health Records (PHRs) for your patients.

**Patient portals** are the internet interface between your patient and your practice. Using a computer, tablet or smartphone, your patient goes directly to the portal to accomplish the tasks you choose. You reduce administrative time, giving your staff more time to focus on revenue-generating activities.

### NoMoreClipboard portal benefits:

- **easy** to deploy and maintain
- **no equipment or software** to buy or install
- **simple** for patients and staff to use
- **start small** and add functions at no additional cost
- the first step toward a **paperless office**, even if you're still using traditional charts
- **sized right and priced right** for physician offices

Your patients can use a portal to:

- Complete pre-registration paperwork
- Request an appointment
- Request a prescription refill
- Ask a nurse a question
- Ask a billing question
- Access a practice-sponsored PHR

A patient portal is a simple way to meet patient engagement requirements for meaningful use and to qualify for stimulus funds. Customize the portal with your logo, color and practice name.

---

## free with your portal: Personal Health Records for your patients

Your portal includes free NoMoreClipboard Personal Health Record accounts for all your patients and their family members — a service you can promote alongside the convenience of the patient portal.

PHRs are portable online records your patients create and maintain. They can use this tool to consolidate and manage all their records in one place, accessible to them any time from any web-enabled device (i.e. PC, Mac, laptop, tablet or smartphone).

- Help patients take an active role in their own care with a PHR
- Patients can include up to 10 family members on the free membership your practice will provide
- PHRs are especially helpful for
  - Families with children
  - Patients managing healthcare for aging parents
  - Patients managing a chronic disease
