Offices:	1

We just recently began using WebChart EHR and are very happy with the system. We chose WebChart because it came recommended by our Medical Manager software support team. The system interfaces well with Medical Manager and there was no need to change our billing system. WebChart is a very good deal for the price and we are really pleased with how cost-effective it is.

We decided on an implementation plan that allowed us to master one step at a time before moving on to the next. We've found WebChart to be very user friendly. The transition has been smooth, and we're enjoying the many benefits that come with having an electronic medical record. Our medical records are easy to access and all in one place, and there are no more paper charts to contend with. Another benefit of the system is that more than one person can access a record at a time. This is greatly improving the efficiency of our practice.

Whenever we've needed it, customer service has been very helpful and fairly quick. As our practice isn't very tech-savvy, we rely on customer service regularly to address questions and issues we are facing and we have been pleased with the service we've received.

I would definitely recommend WebChart to other practices. The system has been easy to use and has allowed us to improve our services. With less paperwork and more efficient practice management, we're able to offer improved coordinated care to our patients.

I'd be happy to answer any additional questions you may have about WebChart EHR.
